A jet engine is a type of reaction engine discharging a fast-moving jet that generates thrust by jet propulsion. This broad definition includes airbreathing jet engines (turbojets, turbofans, ramjets, and pulse jets). In general, jet engines are combustion engines. Common parlance applies the term jet engine more narrowly, referring to various airbreathing jet engine, a type of reaction engine.

An internal combustion engine (ICE) is a heat engine where the combustion of a fuel occurs with an oxidizer (usually air) in a combustion chamber that is an integral part of the working fluid flow circuit. In an internal combustion engine, the expansion of the high-temperature and high-pressure gases produced by combustion applies direct force to some component of the engine.

1. Intake stroke: draws air and fuel from the intake manifold, past the open intake valve, and into the

cylinder.. The amount of fuel going into the engine must be based on the amount of air going into the engine so the mixture is appropriate for the conditions.
